

Ironman Langkawi Training Programme

Athlete: 26M, Singapore, 165cm/66kg | Race Day: 21 Nov 2026

Ironman Langkawi — 18-Week Training Programme

Athlete profile: 26yo male, Singapore-based, 165cm / 66kg. Prior 70.3 Langkawi finisher. Goal: full-distance completion, strong finish, knee managed throughout.

Programme starts: 18 July 2026 · **Race day:** Saturday 21 November 2026

How to Read This Document

Every session below is tagged (e.g. **RUN-EASY, BIKE-HILL**) and carries its own HR/pace/power/cadence target, pulled from the zone tables in Section 2. Follow the numbers, not the feel — especially in the first 8 weeks while we’re managing the knee.

Testing checkpoints: Do a 20min bike FTP test and a 400m swim time trial in **Week 4**, and a 30min run time trial in **Week 4 or 5** (only once running is fully pain-free). Retest FTP in **Week 10** and **Week 14**. All zones below will shift as these come in — I’ve estimated from your existing data in the meantime.

1. Ground Rules

- Monday 20 July’s doctor visit is a gate.** Everything below assumes a soft-tissue verdict (plica/tendinitis/tracking issue), not a structural one. If it’s more serious, pause and rebuild the plan around medical advice.
- Knee traffic light:** Sharp pain / swelling / instability = STOP the session immediately. Dull ache fading <24h = monitor, continue as planned. Ache lingering 48h+ or worsening = drop back one load level for 3-5 days.
- Every run starts with 5 minutes of walking or very light jogging — no exceptions.
- Training days ramp gradually into 6 days/week doubles — see Section 3.
- Fixed rest day: **Friday** (shift only if unavoidable — preserve the rest day and spacing between hard sessions).

2. Zone Reference Tables

Inputs used: Max HR 206 (measured) · FTP ~180W (old test) / working estimate 205W pending Week 4 retest, based on recent 130km ride data · Run anchor: Norwegian 4x4 @ 4:15-4:25/km, HR180-190 · Swim anchor: 2:05/100m @ HR144.

2.1 Bike Power & HR Zones (Working FTP: 205W — MANDATORY retest Week 4)

Zone	%FTP	Power	HR (bpm)	Cadence	Use
Z1 Recovery	<55%	<113W	<126	85-95	Active recovery
Z2 Endurance	55-75%	113-154W	126-146	88-95	Base volume
Z3 Tempo	75-85%	154-174W	147-160	85-90	Sustained hard
Z4 Threshold	85-95%	174-195W	161-175	70-90*	Race-sim, hills
Z5 VO2	95-105%+	195-215W+	176-195	varies	Rare, short only

*Climbing efforts use lower cadence (70-80) with higher resistance.

IM race-day bike target: NP 160-175W (78-85% working FTP) · HR 140-152 · Cadence 88-92. This is intentionally below your stated 180W goal — Ironman bike pacing that’s too aggressive is the single biggest cause of blown-up marathons. Build toward higher sustainable power in training; ride conservatively on race day.

2.2 Run Pace & HR Zones (Daniels-style, anchored to your Norwegian 4x4 data)

Zone	Pace (min/km)	HR (bpm)	Use
E — Easy/Recovery	5:45-6:15	130-155	Base, long run bulk, shakeouts
M — Steady/Marathon	5:15-5:45	155-170	Long-run finishing miles, IM race-pace work
T — Threshold/Tempo	4:50-5:05	172-183	Tempo intervals
I — Interval/VO2max	4:15-4:25	183-195	Your Norwegian 4x4 zone — used sparingly, avoided early while knee-managing

IM race-day run target: 6:00-6:20/km · HR 145-158 (E-to-M boundary — deliberately conservative off a 180km bike in heat, to protect a strong finish rather than blow up at 30km).

2.3 Swim Pace & HR Zones

Zone	Pace /100m	HR (bpm)	Use
Z1 Recovery	2:20+	<130	Technique, warm-up
Z2 Endurance	2:05-2:15	130-144	Bulk volume
Z3 Threshold/CSS	1:55-2:05	145-155	Race-effort blocks
Z4 Surge	1:50-1:55	156+	Sighting/positioning drills only

IM race-day swim target: 2:05-2:10/100m · HR ~140-150. Suggest a 400m TT in Week 4 to confirm real CSS.

2.4 Session-Type Glossary (full prescriptions in Section 3a)

Tag	Definition
SWIM-EN	Endurance swim, Z2 throughout
SWIM-TECH	Drills/technique, Z1 effort
SWIM-RACE	Continuous block at Z3
BIKE-EN	Steady Z2, cadence 88-95
BIKE-TEMPO	Z3 blocks within a Z2 ride
BIKE-HILL	Z3-Z4 climbing simulation, cadence 70-80
BIKE-LONG	Long Z2 ride, race-nutrition practice
RUN-EASY	Zone E, conversational, knee-monitoring
RUN-LSD	Long run, Zone E building to E/M blend
RUN-INT	Structured intervals — see Section 6
RUN-RACE	Continuous blocks at IM race pace/HR
BRICK	Run directly off the bike
STR/PLYO	Strength & plyometric circuit (A/B/C, Section 12)

3a. Session Template Library — Full Prescriptions

Use these structures every time you see the tag. Numbers reference Section 2.

SWIM-EN (Endurance Swim)

- **Warm-up (400m):** 200m easy free (Z1) + 4x50m drill (catch-up or single-arm) w/15sec rest
- **Main set:** bulk of prescribed distance as continuous or broken swim at **Z2: 2:05-2:15/100m, HR130-144**. Break into 200-400m repeats w/10-15sec rest if needed to hold pace.
- **Cool-down (200m):** easy free, Z1, focus on long stroke

SWIM-TECH (Technique)

- **Warm-up (300m):** easy free
- **Main set:** drill-heavy — catch-up drill, single-arm drill, fist swimming, 6-1-6 drill, each 4x50m w/15-20sec rest, Z1 effort throughout (**HR<130**), focus on catch and body rotation, not speed
- **Cool-down (200m):** easy free

SWIM-RACE (Race-Effort Continuous Block)

- **Warm-up (400-600m):** progressive — 200m easy, 200m build, 4x50m at race pace w/15sec rest
- **Main set:** continuous block at **Z3: 1:55-2:05/100m (race portion) or 2:05-2:10/100m (full race-pace simulation), HR145-155**
- **Cool-down (200-300m):** easy Z1

BIKE-EN (Endurance Ride)

- **Warm-up (10min):** Z1, cadence build 80→90rpm
- **Main body:** **Z2, 113-154W, HR126-146, cadence 88-95**, steady, nose-breathing effort
- **Cool-down (5-10min):** Z1 spin, cadence 80-85

BIKE-TEMPO

- **Warm-up (15min):** Z1-Z2 progressive
- **Main set:** prescribed Z3 blocks — **154-174W, HR147-160, cadence 85-90** — with equal or greater Z2 recovery between efforts
- **Cool-down (10min):** Z1 spin

BIKE-HILL (Climbing Simulation) — see Section 9 for full detail

- **Warm-up (15min):** Z1-Z2 + 3x1min cadence builds
- **Main set:** 4-6x5min @ **Z3-Z4: 154-195W, HR147-175, cadence 70-80**, resistance/gradient up, seated focus early in build, standing efforts added from Week 10
- **Recovery between reps:** 3min Z1, cadence 90+, resistance off
- **Cool-down (10min):** Z1 spin

BIKE-LONG

- **Warm-up (15min):** Z1-Z2 progressive
- **Main body: Z2, 113-154W, HR126-146, cadence 88-92**, includes 1x rolling/hill section per Section 9 from Week 9 onward. Practice race nutrition (60-90g carb/hour) every ride 90min+.
- **Cool-down (10min):** Z1 spin

RUN-EASY

- **Warm-up:** 5min walk/very light jog
- **Main body:** continuous **Zone E: 5:45-6:15/km, HR130-155**, fully conversational
- **Cool-down:** 3-5min walk + calf/quad stretch

RUN-LSD (Long Steady Run)

- **Warm-up:** 5min walk
- **Main body:** first 70-80% of run at **Zone E (5:45-6:15/km, HR130-155)**; final 20-30% (from Week 12 onward) shifts to **Zone M (5:15-5:45/km, HR155-170)** to rehearse IM race-pace legs under fatigue
- **Cool-down:** 5min walk

RUN-INT (Intervals) — full progression in Section 6

- **Warm-up (10-15min):** Zone E jog + 4x20sec strides (relaxed, not maximal — knee-safe)
- **Main set:** per Section 6 table, effort/pace/HR as prescribed
- **Cool-down (10min):** Zone E jog + walk

RUN-RACE (Race-Pace Continuous)

- **Warm-up (10min):** Zone E
- **Main set:** continuous block at **IM race pace: 6:00-6:20/km, HR145-158**
- **Cool-down (5-10min):** Zone E/walk

BRICK

- Straight off the bike, minimal transition (<3min): shoes on, go
- First 5-10min will feel heavy/awkward regardless of fitness — this is normal, NOT a knee flag unless pain is sharp/localized
- Effort: **Zone E, HR<158**, focus on cadence turnover (aim 170+ steps/min) rather than pace

3. Weekly Training-Day Ramp

Weeks	Structure
1-2	Single sessions, 4-5 days/week (rehab)
3-4	1-2 double-session days/week
5-6	3 double-session days/week
7+	Full 6 days/week, mostly doubled

4. PHASE 0 — Rehab & Reload (Weeks 1-2)

Week 1 (18-24 Jul) — Active Rest. No running. No hard cycling.

Day	AM	PM
Mon	Rest / doctor visit	Mobility 10min hip+ankle, no knee load
Tue	SWIM-TECH 2000m, full-stroke dominant, light kick only if pain-free	Rest
Wed	BIKE-EN 45min, Z1-Z2 (HR<145), cadence 85-95, seated only	Rest
Thu	SWIM-TECH 2000m, drills (catch-up, single-arm)	Rest
Fri	Full rest	—
Sat	BIKE-EN 60min, Z2 (HR126-146), seated only	Rest
Sun	Walk 30-40min, test stairs gently + mobility	—

Gate: pain-free stairs/daily activity by Sunday → proceed. If not, repeat this week.

Week 2 (25-31 Jul) — Reintroducing Load

Day	AM	PM
Mon	Rest	STR/PLYO Circuit A
Tue	SWIM-EN 2500m, mix full-stroke + easy kick, HR130-144	Rest
Wed	BIKE-EN 60min Z2 + 4x2min @ Z3 (HR147-160) seated, cadence 90+	Rest
Thu	Run-walk test: 20min total, 1min jog (HR<150)/2min walk x6-7, flat/soft surface	STR/PLYO Circuit A
Fri	Full rest	—
Sat	BIKE-EN 75min Z2	Run-walk 20min (only if Thu pain-free)
Sun	SWIM-EN 3000m, HR130-144	STR/PLYO Circuit A

Gate to Phase 1: two consecutive pain-free run-walk sessions required before continuous running begins.

5. PHASE 1 — Base Building (Weeks 3-7, 1 Aug-4 Sep)

Weeks 3-4

Day	AM	PM
Mon	Rest	STR/PLYO Circuit B
Tue	SWIM-EN 2800m, ≤40% pull buoy, HR130-144, pace 2:05-2:15/100m	Rest
Wed	BIKE-EN 75-90min Z2 + cadence drills 3x5min @95+rpm	RUN-EASY 25-30min continuous, Zone E, HR130-155, pace 5:45-6:15/km
Thu	RUN-EASY 30min continuous, Zone E, HR130-155 (first continuous week)	Rest
Fri	Full rest	—
Sat	BIKE-LONG 2hrs Z2 (HR126-146), rolling terrain if outdoor	STR/PLYO Circuit B
Sun	RUN-LSD start 30min, +5min/wk, Zone E, pace 5:45-6:15/km, HR130-155	SWIM-EN 1500m recovery (optional)

Weeks 5-7

Day	AM	PM
Mon	Rest	STR/PLYO Circuit B/C
Tue	SWIM-EN 3000-3500m, leg-inclusive kick sets, HR130-144	RUN-EASY 30min OR rest (alternate wks)
Wed	BIKE-TEMPO 90min Z2 + 4x4min @Z3 (HR147-160), cadence 90+	RUN-EASY 30-35min, Zone E, HR130-155
Thu	RUN-INT Wk5: 4x2min@Z3 (HR172-183 (T))/2min jog recovery — see Section 6	STR/PLYO Circuit C
Fri	Full rest	—
Sat	BIKE-LONG 2-2.5hrs Z2, short rolling hills for form	—
Sun	RUN-LSD: Wk5 35min / Wk6 45min / Wk7 50min, Zone E, pace 5:45-6:15/km	SWIM-EN 2000m recovery

Checkpoint: by end of Week 7, ~50min continuous running pain-free required before Phase 2. If not there, extend Phase 1 by a week.

6. Run Interval Progression (RUN-INT, from Week 5)

Weeks	Structure	Effort
5-6	4x2min / 2min jog recovery	Z3, HR172-183 (T), pace 4:50-5:05/km
7-9	5x3min / 90sec recovery	Z3, HR172-183 (T)
10-13	6x4min at goal marathon-effort	Z3-low Z4, HR172-195 (T-I blend), pace 4:15-5:05/km
14-15	2x15min continuous at IM race pace	HR145-158, pace 6:00-6:20/km
16-17 (taper)	4-6x2-4min pickups only	Z3, HR172-183 (T), low volume

Keep all hard efforts on flat, soft-if-possible surfaces. No downhill running in intervals until Phase 3.

7. PHASE 2 — Build 1 (Weeks 8-11, 5 Sep-2 Oct)

Day	AM	PM
Mon	Rest	STR/PLYO Circuit C
Tue	SWIM-RACE 3500-4000m incl. continuous 2000m @Z3 (pace 1:55-2:05/100m, HR145-155)	RUN-EASY 35-40min
Wed	BIKE-HILL 75-90min — see Section 9 (Z3-Z4, HR146-165, cadence 70-80 climbing)	RUN-EASY 30min OR rest (alternate)
Thu	RUN-INT per Section 6 progression	STR/PLYO Circuit C
Fri	Full rest	—
Sat	BIKE-LONG: Wk8 2.5hrs / Wk9 3hrs / Wk10 3.5hrs / Wk11 4hrs, Z2 (HR126-146) + hill repeats/rolling terrain	—
Sun	RUN-LSD: Wk8 55min / Wk9 65min / Wk10 75min / Wk11 90min (~14-16km), Zone E, pace 5:45-6:15/km	Optional SWIM-EN 1500-2000m

First BRICK: Week 9 or 10 Saturday — 15-20min easy jog (HR<158) straight off the long bike. Heavy legs first 10min = normal. Sharp/localized knee pain = stop, hold bricks 2 weeks before retrying.

FTP retest: Week 10 — update all bike zones from Section 2.1 after this.

8. PHASE 3 — Build 2 / Peak (Weeks 12-15, 3 Oct-30 Oct)

Day	AM	PM
Mon	Rest	STR/PLYO Circuit C (dial back plyo volume, keep strength)
Tue	SWIM-RACE 3800-4200m incl. continuous 3000m+ @race pace (2:05-2:10/100m, HR140-150)	RUN-EASY 40min
Wed	BIKE-HILL + race-effort blocks, 90min-2hrs, HR140-165	RUN-EASY 30-40min
Thu	RUN-INT race-pace intervals per Section 6	STR/PLYO Circuit C
Fri	Full rest	—
Sat	BIKE-LONG + BRICK: Wk12 4hrs+20min run / Wk13 4.5hrs+30min run / Wk14 (PEAK) 5-5.5hrs+30-40min run / Wk15 3.5hrs+20min run (down week) — bike Z2 HR126-146, brick run HR<158	—
Sun	RUN-LSD: Wk12 100min(~17-18km) / Wk13 120min(~20-21km) / Wk14 150min(~25-27km, longest of plan) / Wk15 90min recovery-pace (Zone E, HR130-155)	Optional easy swim

Week 14 = peak load. Week 15 is a deliberate ~30% pull-back — a down week, not the taper.

FTP retest: Week 14, before the taper begins.

Highest injury-risk window of the plan. If the knee flares in Weeks 12-14, cut the session short — protecting Week 18 matters more than any single long session here.

9. Bike Hill-Specific Work — Twin Sisters Prep (BIKE-HILL, from Week 8)

- **Wednesdays, Wk8+:** Trainer gradient/resistance sim — 4-6x5min @Z3-Z4 (HR146-165), cadence 70-80, resistance up. 3min easy spin (Z1) recovery between.
- **Outdoor, ~1x/2 weeks:** rolling terrain (Mandai, Old Upper Thomson, park connectors) for real climbing/handling — same HR targets.
- **Standing efforts:** introduce cautiously from Week 10 — 30-60sec standing @Z3-Z4, watch knee response closely (standing loads the knee differently to seated).
- **Long rides from Wk9:** include ≥1 extended climbing effort or rolling section within the Z2 ride.

10. Swim Progression Notes

- **Wk1-2:** SWIM-TECH dominant, minimal pure kick.
- **Wk3-4:** Introduce 4x100m kick sets (fins optional) within SWIM-EN, monitor HR drift.
- **Wk5-7:** Pull-buoy ≤40% of session volume; add continuous 1000m+ full-stroke blocks at Z2.
- **Wk8-11:** SWIM-RACE blocks of 2000m+ at Z3, minimal pull buoy.
- **Wk12-15:** Full-distance-adjacent swims, 3000-4200m continuous/near-continuous at race pace.
- **Taper:** shorter, sharper, race-pace-focused; volume drops, crispness stays.

400m time trial: **Week 4** — sets your real CSS pace and refines all swim zones above.

11. PHASE 4 — Taper (Weeks 16-18, 31 Oct-21 Nov)

Week 16 (~70% peak volume)

Day	AM	PM
Mon	Rest	STR/PLYO Circuit A (light maintenance, no new plyo stimulus)
Tue	SWIM-RACE 3000m incl. race-pace 1500m block	RUN-EASY 30min
Wed	BIKE-TEMPO 90min + 3x8min @race effort (HR140-150)	RUN-EASY 25min
Thu	RUN-INT 30min + 4x3min race-pace pickups	Rest
Fri	Full rest	—
Sat	BIKE-LONG 2.5hrs easy-moderate + BRICK 15min jog	—
Sun	RUN-LSD 75min moderate	Easy SWIM-EN 1500m

Week 17 (~50% peak volume)

Day	AM	PM
Mon	Rest	Light mobility only
Tue	SWIM-EN 2500m incl. race-pace 800m	RUN-EASY 25min
Wed	BIKE-TEMPO 60min + 3x5min @race effort	Rest
Thu	RUN-INT 25min + 3x2min pickups	Rest
Fri	Full rest	—
Sat	BIKE-EN 90min easy + BRICK 10min jog	—
Sun	RUN-EASY 45min	Easy SWIM-EN 1500m

Week 18 — RACE WEEK (14-21 Nov)

Day	Session
Mon	SWIM-EN 1500m easy + mobility
Tue	BIKE-EN 40min easy spin, cadence only, no efforts
Wed	RUN-EASY 20min very easy shakeout
Thu	Rest, travel to Langkawi, light walk only
Fri	15min easy swim (feel the water) + 10min easy bike spin, gear check, early sleep
Sat 21 Nov	RACE DAY — Swim 2:05-2:10/100m (HR140-150) · Bike NP160-175W (HR140-152, cadence88-92) · Run 6:00-6:20/km (HR145-158)

No new nutrition/gear/shoes race week. Hydrate from Wednesday. Do not test the knee with anything hard.

12. Strength & Plyometric Circuits — Full Prescriptions (Bodyweight + Bands)

Equipment: bodyweight + resistance bands only (home setup). Every exercise below includes sets x reps, tempo where relevant, and the specific muscle/movement pattern it targets — with a note on why it matters for your knee. Rest 30-45sec between exercises, 90sec between rounds.

Circuit A — Week 2 (rehab-safe, zero impact)

Goal: reactivate the muscles that control knee tracking (VMO, glutes, hip external rotators) without any loading through flexion under impact.

#	Exercise	Sets x Reps	Tempo	Target / Why
1	Glute bridge	2-3 x 15	2sec squeeze at top	Glute max — hip extension, takes load off quads/knee
2	Wall sit	2-3 x 30sec	Static hold, knees ~45° (not 90°)	Quad isometric — builds tolerance without joint movement
3	Clamshells (band around knees)	2-3 x 12/side	Controlled, no swinging	Glute medius — controls inward knee collapse (valgus), the #1 driver of plica irritation
4	Terminal knee extension (band anchored low, loop behind knee)	2-3 x 15/side	Slow, straighten fully	VMO (inner quad) — directly supports patellar tracking
5	Standing calf raise	2-3 x 15	2sec up, 2sec down	Calf/soleus — shock absorption for running return
6	Side-lying leg raise	2-3 x 12/side	Controlled	Hip abductors — pelvis/knee stability
7	Bird dog	2-3 x 10/side	2sec hold at extension	Core/glute anti-rotation — running posture control

Circuit B — Weeks 3-7 (base, light plyo introduced)

Goal: build real strength through range, then introduce very low-amplitude elastic/impact work once bridges/clamshells feel like nothing.

#	Exercise	Sets x Reps	Tempo	Target / Why
1	Bodyweight squat	2-3 x 15	3sec down, 1sec pause, controlled up	Quad/glute compound — knee tracks over 2nd-3rd toe, no valgus
2	Single-leg glute bridge	2-3 x 12/side	2sec squeeze	Unilateral glute — corrects left/right imbalance
3	Step-up (low step ~20cm)	2-3 x 12/side	Controlled, drive through heel	Quad/glute unilateral strength, running-specific pattern
4	Low box step-down (step down slowly, don't jump)	2-3 x 10/side	3sec eccentric lower	Eccentric quad control — this is THE key exercise for plica/patellofemoral issues, teaches the knee to absorb load slowly
5	Band lateral walk	2-3 x 10 steps/side	Slow, knees stay bent	Glute medius under tension — hip stability for both bike and run
6	Single-leg calf raise	2-3 x 12/side	2sec up/down	Calf strength — asymmetries here often show up as knee compensation
7	Side plank + hip dip	2-3 x 10/side	Controlled	Obliques/glute med — lateral core stability
8	Mini pogo hops (small ankle hops, ~2-3cm off ground)	2-3 x 20-30sec	Fast but tiny amplitude, stiff ankle	First true plyometric — trains reactive strength at minimal knee-joint stress

Circuit C — Weeks 8+ (build/peak — only progress here after 2+ consecutive pain-free weeks on Circuit B)

Goal: full running-specific power and landing mechanics.

#	Exercise	Sets x Reps	Tempo	Target / Why
1	Bulgarian split squat (rear foot elevated)	3 x 10/side	2sec down, controlled up	Quad/glute unilateral strength — closest gym analog to running stride mechanics
2	Single-leg Romanian deadlift (bodyweight, reach forward)	3 x 10/side	Slow, controlled	Hamstring/glute posterior chain — balances quad-dominant knee loading
3	Lateral bounds (skater jumps), soft controlled landing	3 x 8/side	Land soft, stick for 1sec	Frontal-plane power + landing control — directly trains what running impact demands
4	Box step-up with knee drive	3 x 10/side	Explosive up, controlled down	Power + hip flexor — running drive phase
5	Low-height depth drop, soft landing (step off ~15-20cm box, absorb, no rebound)	3 x 6-8	Land soft, bend knees deeply	Teaches eccentric shock absorption at higher intensity — bridges to real run impact forces
6	Single-leg calf raise	3 x 15/side	2sec up/down	Continued calf resilience for marathon-distance impact
7	Plank with alternating leg lift	3 x 10/side	Controlled, no hip rotation	Core anti-rotation under fatigue — form-holding for the marathon
8	Band monster walks (forward + lateral)	2 x 10 steps each direction	Slow, knees bent throughout	Glute med/max under constant tension — hip drop control late in the run

Golden rule throughout all three circuits: if any single movement causes a knee reaction, regress *that exercise only* back one circuit level — don't abandon the whole session. Log which exercise triggered it; that's useful information for Monday's doctor too.

13. Weekly Volume Guide (approximate total hours)

Phase	Weekly Hours
Phase 0 (Rehab)	4-6
Phase 1 (Base)	8-10
Phase 2 (Build 1)	10-13
Phase 3 (Peak, Wk14)	13-16
Phase 4 (Taper)	6-8, dropping to ~2 in race week

14. Weekly Checklist

- ☐ Knee pain scale (0-10) logged after every run/hard bike — 3+ not fading in 24h = flag it
- ☐ Sleep prioritised — this is where fitness is actually built, especially while running a business
- ☐ Weekly hours tracking to Section 13 targets
- ☐ Hydration/electrolytes on outdoor heat sessions
- ☐ FTP/CSS/run TT retests done on schedule (Wk4, Wk10, Wk14)
- ☐ Doctor follow-up if knee symptoms haven't resolved by Week 4

Good luck on Monday with the doctor — flag anything they say and Phase 0 gets adjusted before Week 1 locks in.
